Description

What steps will reproduce the problem?

- 1. Define a command with an optional flag at the end of it.
- 2. Enter the command with part of the unique flag and hit enter.

```
< COMMAND name="ip address"
   help="Set the IP address of an interface">
< PARAM name="ip_method"
               \verb|help="Method to get IP"|
               ptype="SUBCOMMAND"
               mode="switch">
< PARAM name="dhcp"
                   help="IP Address negotiated via DHCP"
                   ptype="SUBCOMMAND"
                   mode="subcommand"/>
< PARAM name="ip"
                   help="IP address"
                   ptype="IP_ADDR_MASK">
<PARAM name="secondary"
                       help="Make this a secondary IP address"
                       ptype="SUBCOMMAND"
                       mode="subcommand"
                       optional="true"/>
</PARAM&gt;
</PARAM&gt;
           <ACTION&gt;
               echo ${secondary}
           </ACTION&gt;
       </COMMAND&gt;
```

What is the expected output? What do you see instead?

I expect the optional command to be completed and past on. What I am seeing is an Illegal command line error.

11/17/2018 1/2

"test(config-if-eth0)# ip address 1.1.1.1/24 sec Syntax error: Illegal command line"

What version of the product are you using? On what operating system? 1.7.0 on ubuntu
